

Multi-Dimensional Data Visualization (Parallel Coordinates)

袁晓如

北京大学

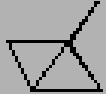

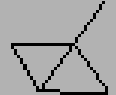

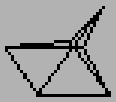

2009年12月25日

Parallel Coordinates History

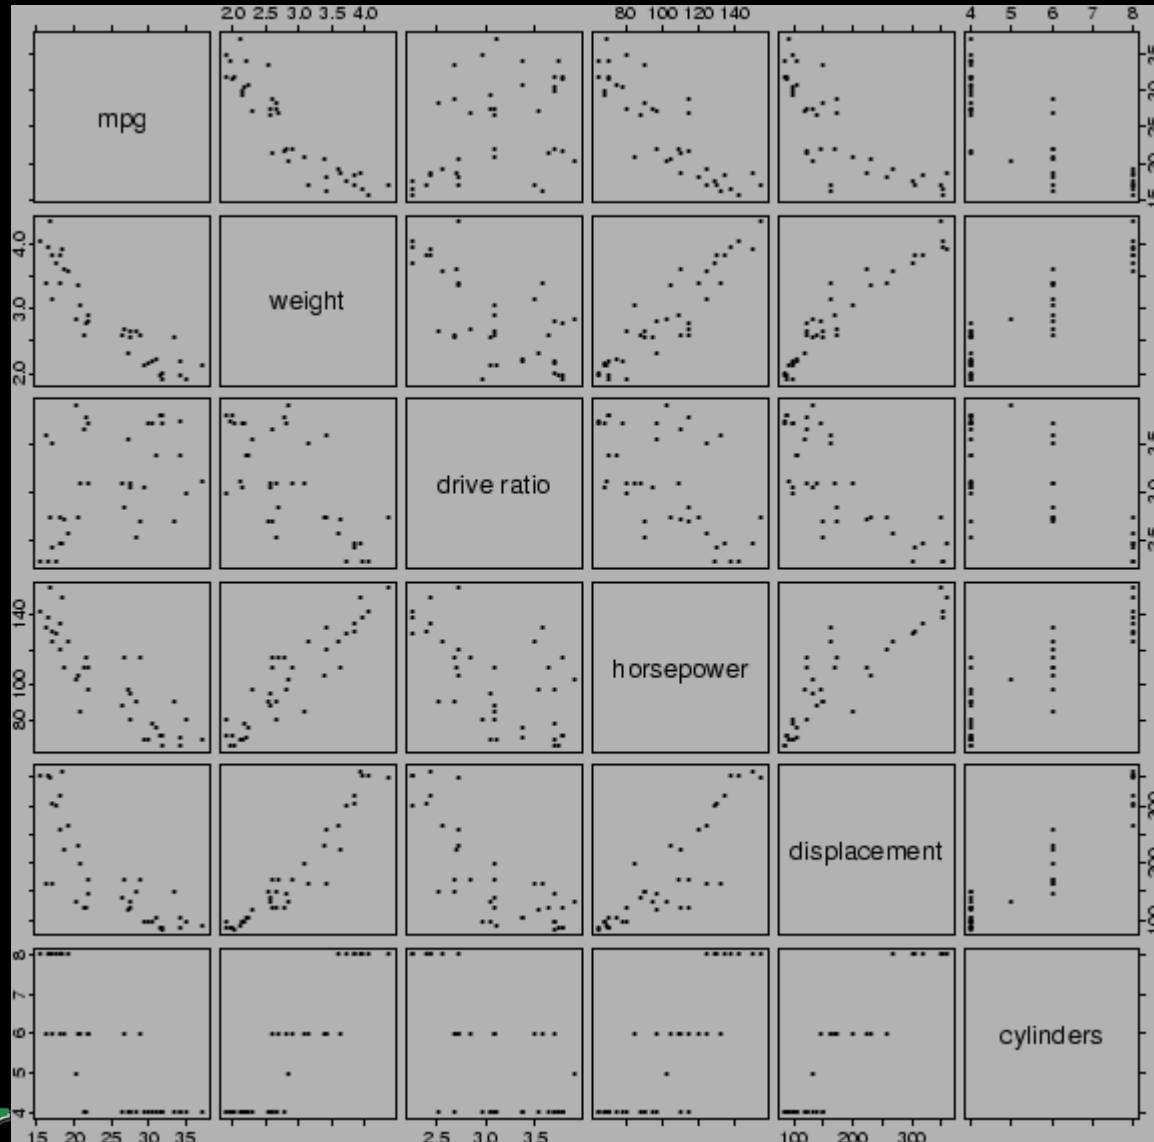

- Invented by Inselberg (1985) for computational geometry
<http://www.math.tau.ac.il/~aiisreal/>
- Introduced by Wegman (1990) for hyper-dimensional data analysis
- Reveal data relationships, anomalies, structures & trends
- Widely used in the statistics, data analysis and visualization domain

Star Glyphs

						
Buick Estate Wagon	Datsun 510	Buick Century Special	Mercury Grand Marquis	AMC Spirit	Pontiac Phoenix	BMW 320i
						
Ford Country Squire Wgn	Dodge Omni	Mercury Caprice	Dodge B1 Regis	VW Scirocco	Plymouth Horizon	VW Rabbit
						
Chevy Malibu Wagon	Audi 5000	Dodge Aspen	Ford Mustang 4	Honda Accord LX	Datsun 210	
						
Chrysler LeBaron Wgn	Volvo 240 GL	AMC Concord DL	Ford Mustang Ghia	Buick Skyline	Fiat Strada	
						
Chevelle	Saab 99 GLE	Chevy Caprice Classic	Nissan GLC	Chevy Citation	VW Dasher	
						
Toyota Corona	Peugeot 604 SL	Ford LTD	Dodge Colt	Olds Omega	Datsun 510	

Scatterplot Matrix

Chernoff Faces

SMILE IF YOU BUNT

Steve C. Wang, an associate professor of statistics at Swarthmore College, charted baseball managers from the 2007 season as Chernoff faces, a method of using the heights, widths and angles of facial features to represent different sets of numbers.

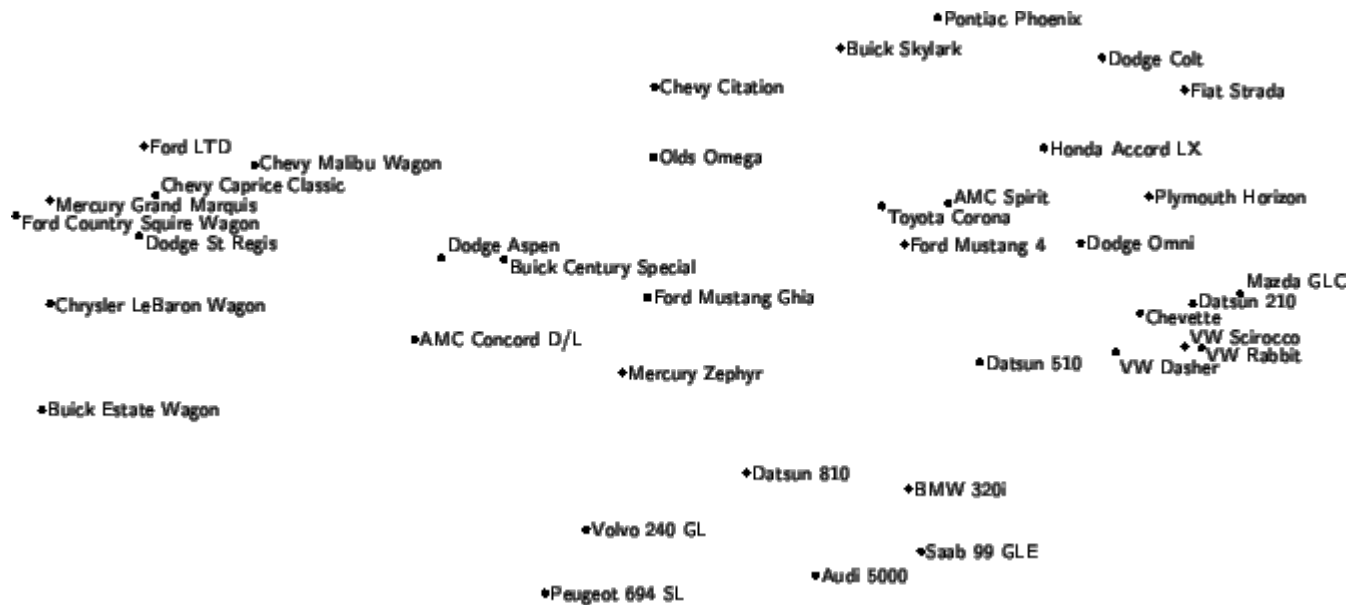

*Percentage of players who had the advantage of batting against an opposite-handed pitcher at the start of the game.

Note: Because different rules cause National League managers to use more pinch-hitters, for example, each manager's rates are compared with his league's average.

Multidimensional Scaling

Parallel Coordinates Basics

- To represent N dimensional data
 - Set N vertical axes in parallel
 - Put data to intersects on corresponding axes
 - Connect intersects

Reorder Parallel Coordinates

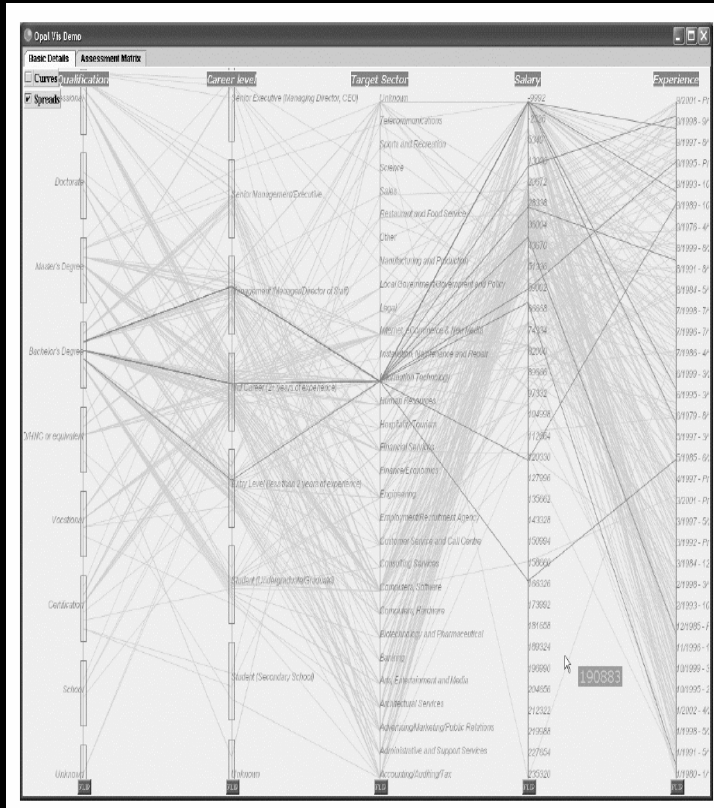

Original

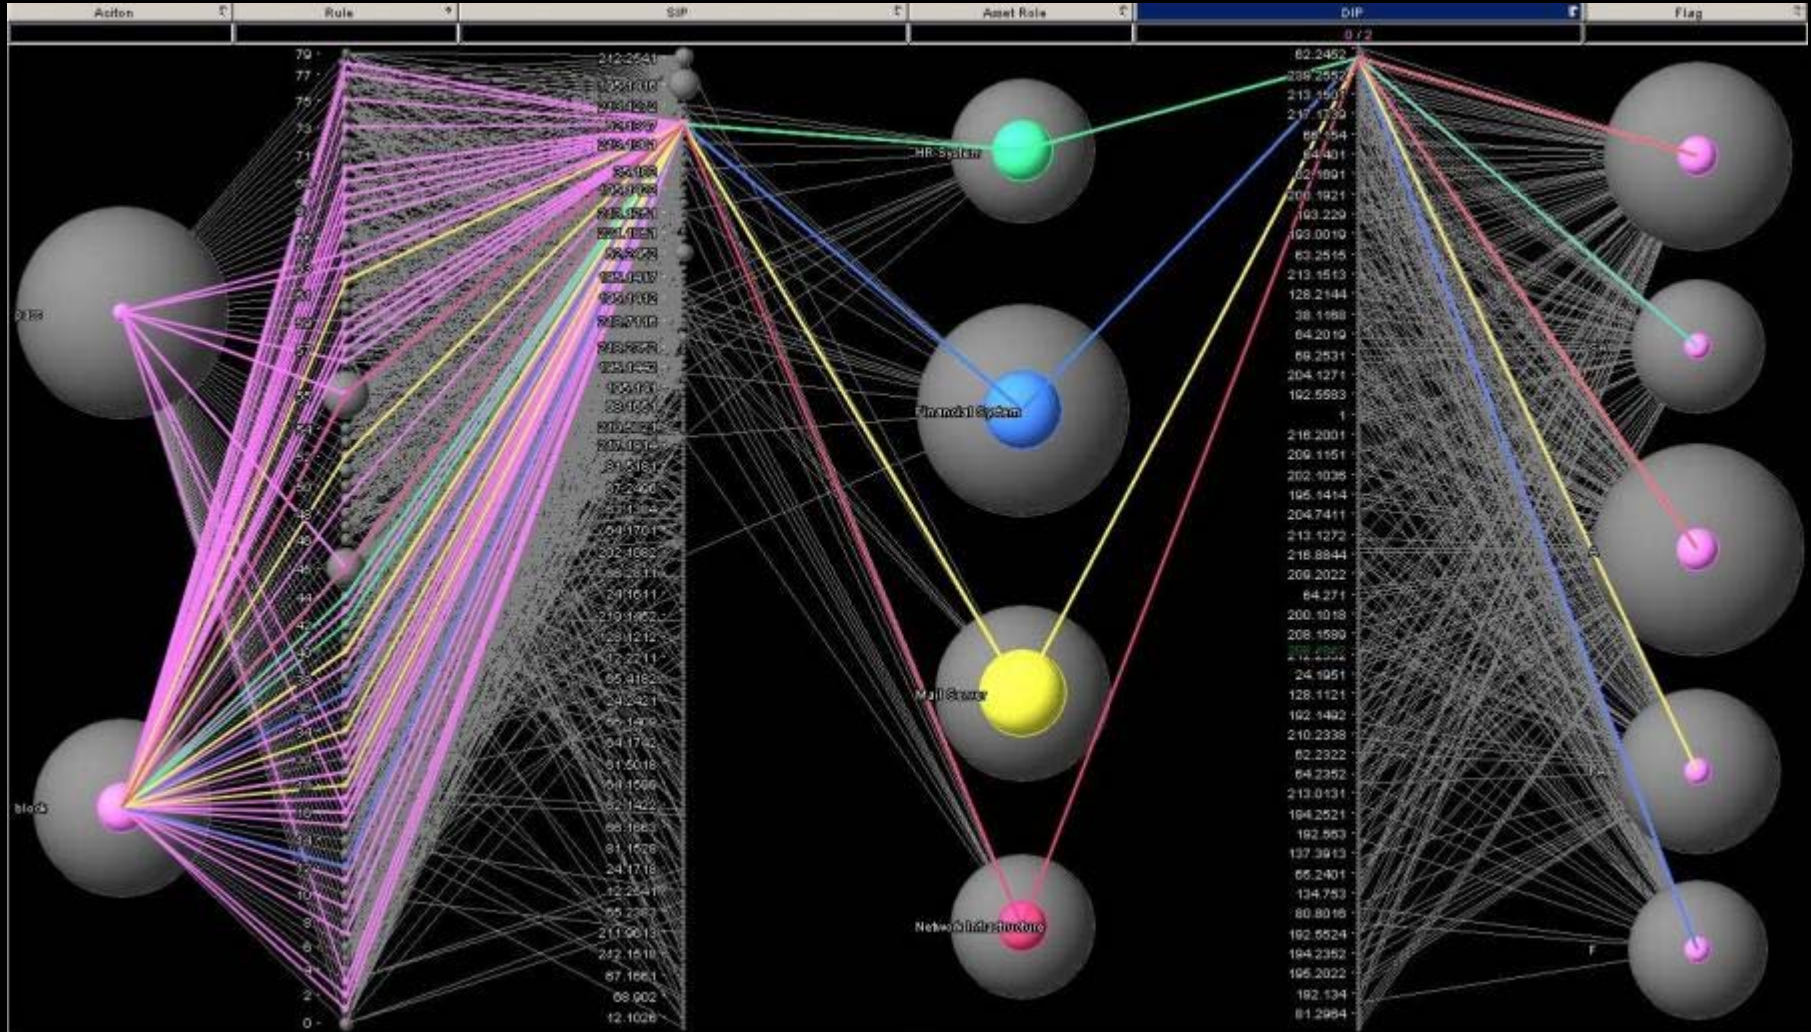

Reordered

Curved Parallel Coordinates

More fluently visibility but drawing curves takes more time and processing

Parallel Coordinate View of a Firewall Log File

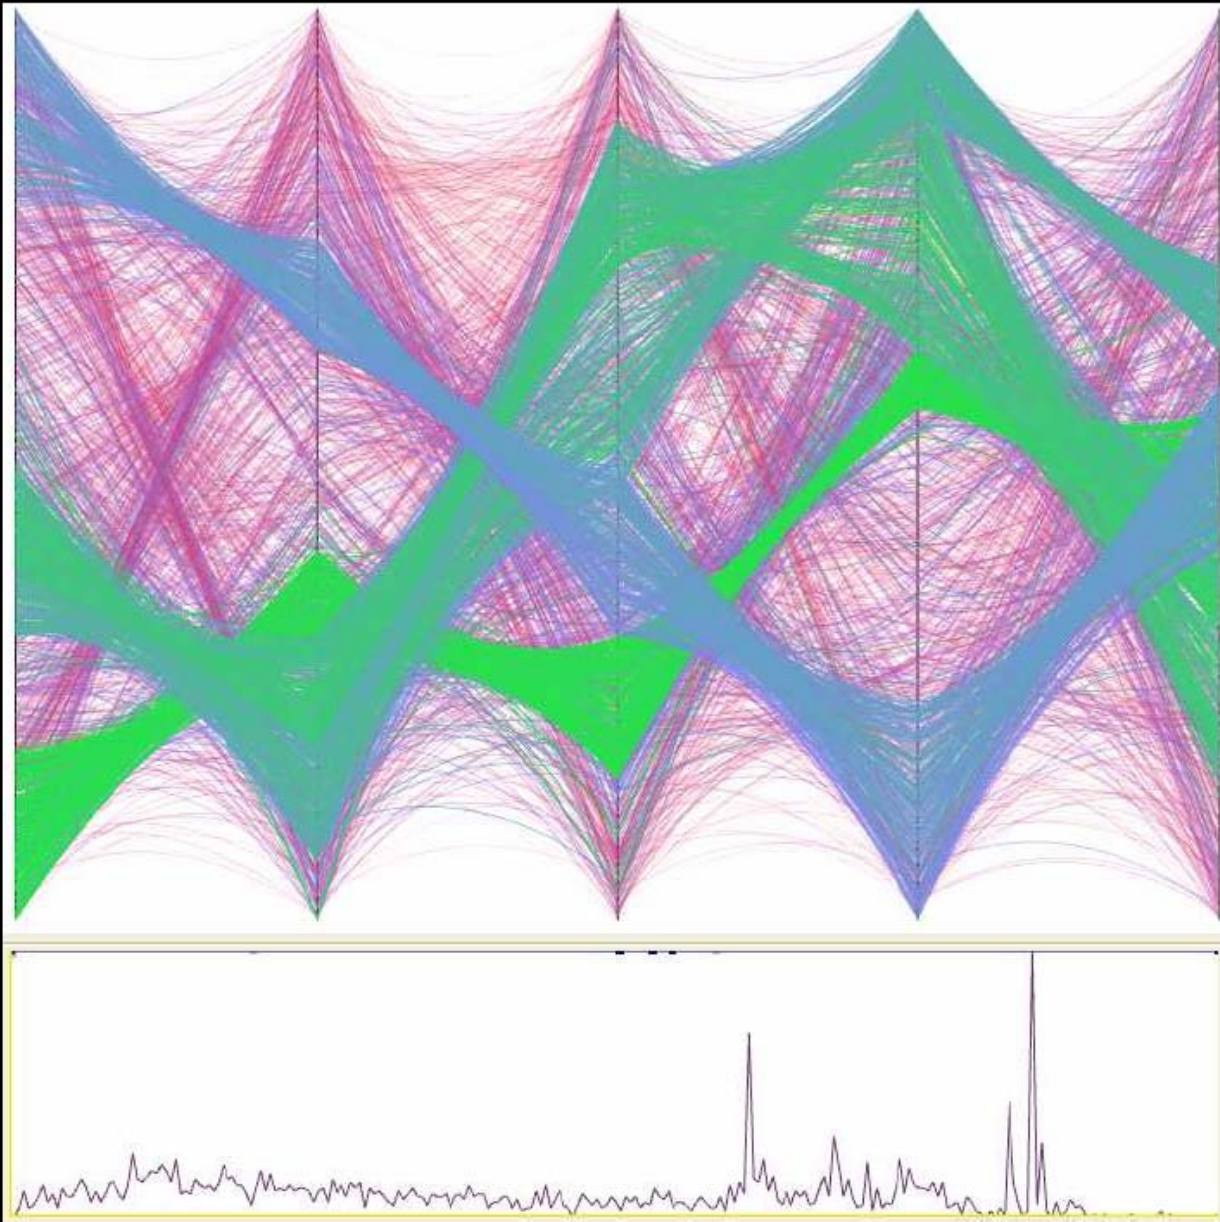

Visual Clustering in Parallel Coordinates

[EuroVis 2008]

Visual Clustering in Parallel Coordinates

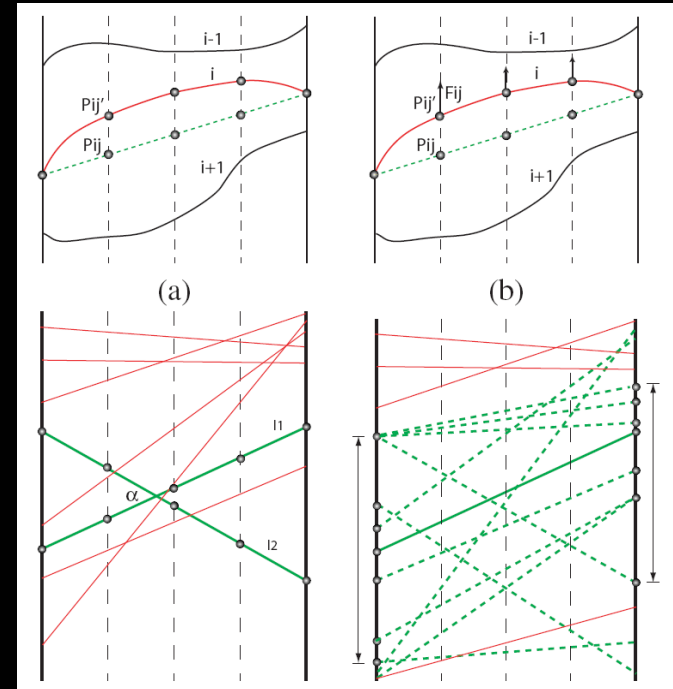

Modeling visual interaction between lines

$$\mathbf{E} = \alpha_c \mathbf{E}_{curvature} + (1 - \alpha_c) \mathbf{E}_{gravitation}$$

$$\mathbf{E}_{curvature} = \sum_{i=1}^n \sum_{j=1}^m |P'_{ij} - P_{ij}|$$

$$\mathbf{E}_{gravitation} = \sum_{i=1}^n \sum_{j=1}^m -F_{ij} \cdot (P'_{ij} - P_{ij}) + E_{ij}$$

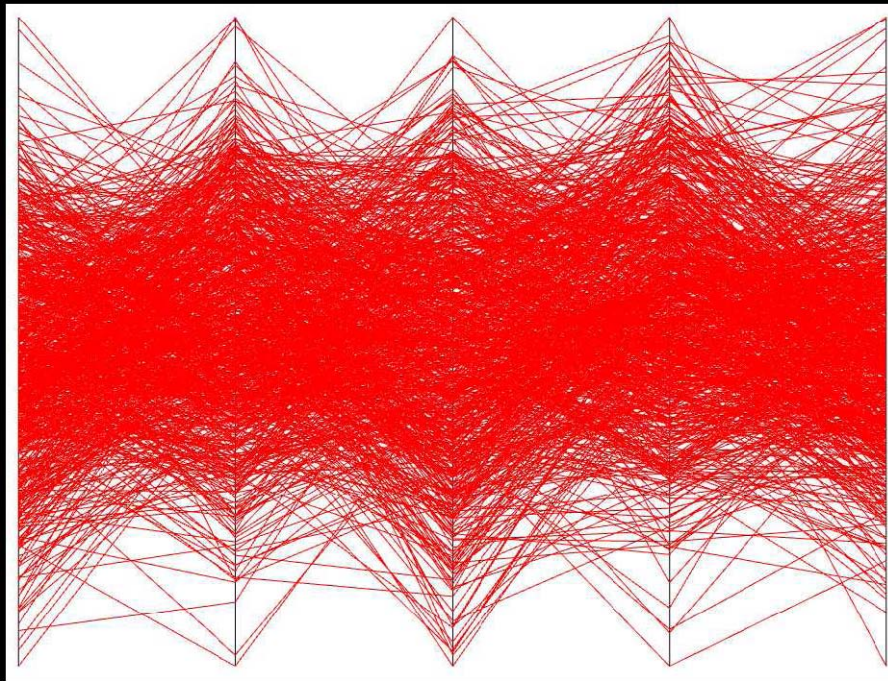

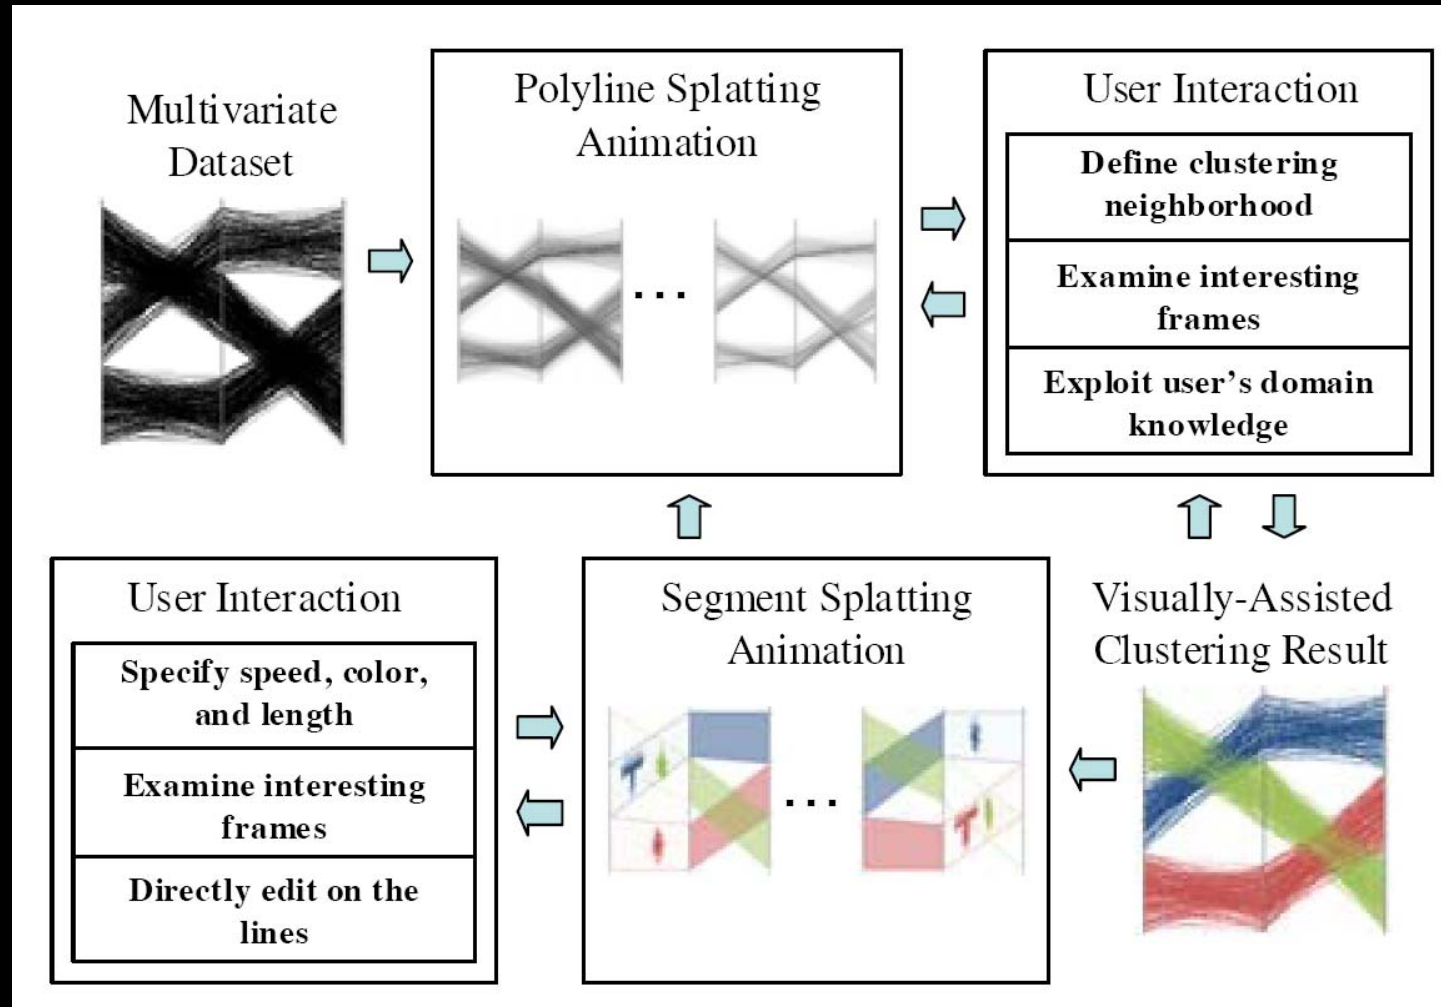

Splattting the Lines in Parallel Coordinates

Polyline Splatter

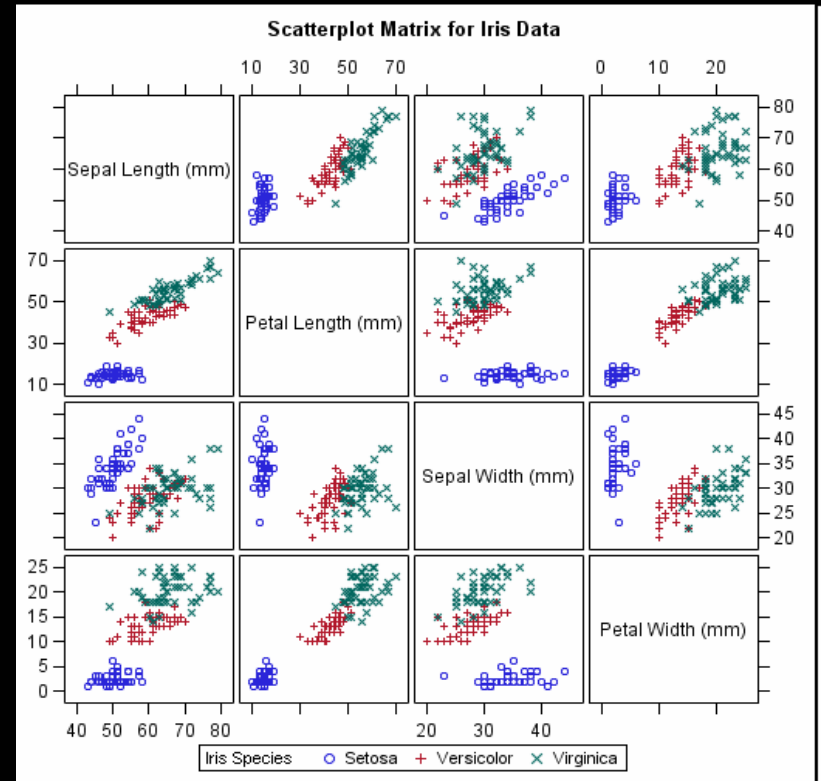

Segment Splatter
