

Mini-Project 1. Machine Learning Basics

*Instructor: Yuan Yao**Due: 23:59 Sunday 3 Oct, 2021*

1 Mini-Project Requirement and Datasets

This project as a warm-up aims to explore basic techniques in machine learning.

1. Pick up ONE (or more if you like) favourite dataset below to work. If you would like to work on a different problem outside the candidates we proposed, please email course instructor about your proposal.
2. Team work: we encourage you to form small team, up to **TWO** persons per group, to work on the same problem. Each team just submit **ONE** report, *with a clear remark on each person's contribution*. The report can be in the format of either a *poster*, e.g.

https://github.com/yuany-pku/2017_math6380/blob/master/project1/DongLoXia_poster.pptx

or *technical report within 8 pages*, e.g. NIPS conference style (preferred format)

<https://nips.cc/Conferences/2019/PaperInformation/StyleFiles>,

with source codes such as Python (Jupyter) Notebooks with a detailed documentation.

3. For Kaggle contests, please register your team with name in the format of `math4995_lastname`, so that we could easily find your results on Kaggle. For example, a team with Shawn Zhu and Kate Wong would be named by `math4995_Zhu_Wong`.
4. In the report, show your proposed scientific questions to explore and main results with a careful analysis supporting the results toward answering your problems. If possible, you should include your Kaggle contest score or rating in the report. Remember: scientific analysis and reasoning are more important than merely the performance tables. Separate source codes may be submitted through email as a GitHub link, or a zip file.
5. Submit your report by email or paper version no later than the deadline, to the following address (`datascience.hw@gmail.com`) with a title “MATH4995: Project 1”

2 Kaggle Contest: Predict Survival on the Titanic

The sinking of the Titanic is one of the most infamous shipwrecks in history.

On April 15, 1912, during her maiden voyage, the widely considered “unsinkable” RMS Titanic sank after colliding with an iceberg. Unfortunately, there were not enough lifeboats for everyone onboard, resulting in the death of 1502 out of 2224 passengers and crew.

While there was some element of luck involved in surviving, it seems some groups of people were more likely to survive than others.

In this challenge, we ask you to build a predictive model that answers the question: “what sorts of people were more likely to survive?” using passenger data (*i.e.* name, age, gender, socio-economic class, etc). Visit the following website to join the Kaggle contest:

<https://www.kaggle.com/c/titanic>

Requirements. For Kaggle contests, please register your team with name in the format of `math4995_lastname`, so that we could easily find your results on Kaggle. For example, a team with Shawn Zhu and Kate Wong would be named by `math4995_Zhu_Wong`.

3 Kaggle Contest: Home Credit Default Risk

Many people struggle to get loans due to insufficient or non-existent credit histories. And, unfortunately, this population is often taken advantage of by untrustworthy lenders.

Home Credit strives to broaden financial inclusion for the unbanked population by providing a positive and safe borrowing experience. In order to make sure this underserved population has a positive loan experience, Home Credit makes use of a variety of alternative data—including telco and transactional information—to predict their clients’ repayment abilities.

While Home Credit is currently using various statistical and machine learning methods to make these predictions, they’re challenging Kagglers to help them unlock the full potential of their data. Doing so will ensure that clients capable of repayment are not rejected and that loans are given with a principal, maturity, and repayment calendar that will empower their clients to be successful.

Visit the following website to join the competition.

<https://www.kaggle.com/c/home-credit-default-risk/>

Requirements. For Kaggle contests, please register your team with name in the format of `math4995_lastname`, so that we could easily find your results on Kaggle. For example, a team with Shawn Zhu and Kate Wong would be named by `math4995_Zhu_Wong`.

4 Self Proposals

Peer Review

In this exercise of open peer review, please write down your comments of the *reports rather than of your own team* in the following format. Be considerate and careful with a precise description, avoiding offensive language.

Deadline is 11:59pm Oct. 22, 2021. Submit all your reviews in a single zip file using **canvas**. Rebuttal is open afterwards.

- Summary of the report.
- Describe the strengths of the report.
- Describe the weaknesses of the report.
- Evaluation on quality of writing (1-5): Is the report clearly written? Is there a good use of examples and figures? Is it well organized? Are there problems with style and grammar? Are there issues with typos, formatting, references, etc.? Please make suggestions to improve the clarity of the paper, and provide details of typos.
- Evaluation on presentation (1-5): Is the presentation clear and well organized? Are the language flow fluent and persuasive? Are the slides clear and well elaborated? Please make suggestions to improve the presentation.
- Evaluation on creativity (1-5): Does the work propose any genuinely new ideas? Is this a work that you are eager to read and cite? Does it contain some state-of-the-art results? As a reviewer you should try to assess whether the ideas are truly new and creative. Novel combinations, adaptations or extensions of existing ideas are also valuable.
- Confidence on your assessment (1-3) (3- I have carefully read the paper and checked the results, 2- I just browse the paper without checking the details, 1- My assessment can be wrong)

Rebuttal

The rebuttal period starts from now, till *11:59pm Oct 31, 2021*. Restrict the number of characters of your rebuttal within **5,000**. Submit your rebuttal in PLAIN TEXT or PDF format to **canvas** with filename comprising the corresponding group number: e.g. rebuttal1_group2.pdf.

The following tips of rebuttal might be helpful for you to follow:

1. The main aim of the rebuttal is to answer any specific questions that the reviewers might have raised, or to clarify any misunderstanding of the technical content of the paper.
2. Keep your rebuttal short, to-the-point, and specific. In our experience, such rebuttals have the maximum impact.
3. Always be polite and professional. Refrain from name calling or rude comments, especially in response to negative reviews.
4. Highlight the changes in your manuscripts had you made a simple revision.
